How to Add a Timestamp Using DIDsign

Before you begin, you need a Sporran wallet and a DID. (In the future other wallets will support DIDs on the KILT blockchain, and the process may differ slightly in those wallets.)

If you don't already have these, follow our guides to setting up Sporran and getting a DID.

Once you have your DID, signing a file is free.

Note, adding a timestamp requires a small transaction fee (around 0.0045 KILT, as it is created as blocktime and added to the blockchain,

Verifying a file is always free and requires no DID or Sporran.

Adding a Timestamp

For the basic steps on signing with DIDsign, see our <u>How-to guide</u>.

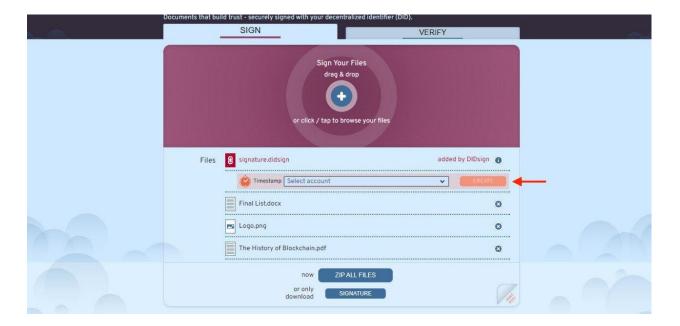

After signing, your DIDsign signature will be added to the list of your files, along with the option to have the time of signing recorded on the blockchain. To add a timestamp:

Step 1: Click START

Step 2: Choose the account you wish to pay the transaction fee from. (This may be the same or a different account. Please ensure it contains enough KILT to cover the transaction fee, currently around 0.004 KILT.)

Step 3: Click "CREATE" next to the account selected.

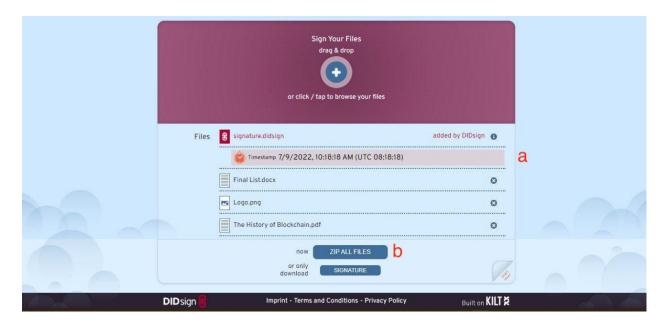

This will trigger the Sporran wallet to pop up.

Step 4: Sign in Sporran.

Your timestamp will then be added to the KILT blockchain. Important: Leave the tab open until the transaction is complete.

When complete, the timestamp will show the date and time the file was signed in both local and coordinated universal time (UTC) [a].

Step 5: Download the signed file by clicking "ZIP ALL FILES" [b]. This will download them to your computer. Save the zip file.

Note, your data belongs to you – DIDsign doesn't keep a copy of it – so all files are deleted from the browser when it is closed at the end of the session. If you close the browser or switch to the verifier tab before downloading and saving your signed file you will lose it.

That's it!

You can now send your zip file for verification to anyone you choose via your preferred medium (email, Telegram, WhatsApp, etc.).

Verifying Files

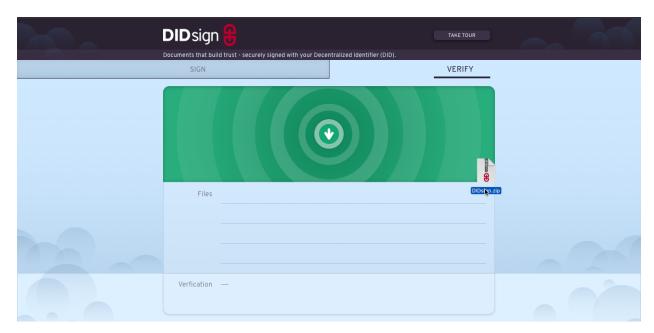

Verifying is free and the verifier doesn't need a DID or Sporran wallet. They just need to go to <u>DIDsign.io</u> and add your zip file in the Verify section, following the process outlined below:

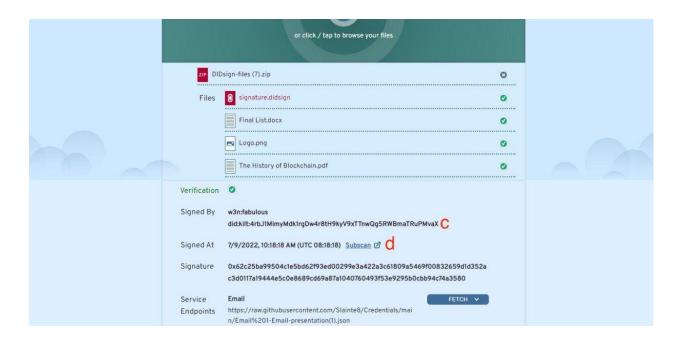

Step 1: Go to DIDsign.io

Step 2: Click the "VERIFY" tab (top right).

Step 3: Drag & drop the file you want to verify into the dropzone, or add from files stored on your computer.

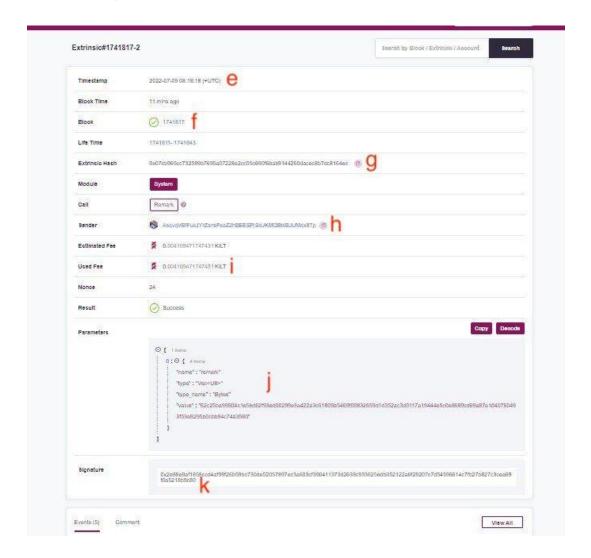

For further details, the verifier can click "Subscan" next to the date and time to check the registration of the timestamp on the blockchain.

Subscan

Subscan is a blockchain explorer that shows details of the timestamp on the blockchain, including:

- The date and time the file was signed in UTC time [e]
- The number of the block it was recorded on [f]
- The hash on the blockchain representing the timestamp [g]
- The sender's address (the account the transaction was paid from) [h]
- The cost of the transaction (in KILT) [i]
- The remark, which contains the DIDsign signature [j]
- The signature of the transaction [k]
